

ITEM No. 2924

BRIDGE and TRESTLE SET

17 PIECES

INSTRUCTION SHEET

The contents of the set are:

- 2 sets of trestles numbered 1 through 5.
- 2 ramp sections numbered 14
- 2 bridge sides
- 1 bridge deck
- 2 adapters

1. Lay the track out on a flat surface to conform with the track plan, but do not join the track.
2. Insert the straight track, at the bridge location, into the bridge deck.
3. Assemble the bridge sides to the deck.
4. Wedge deck-bridge adapters on end of bridge under protruding track. Note: Notch on adapter and dimple on bridge sides should line up.
5. Insert track into wide end of No. 3 trestle, slide along track all the way to the last tie. Insert track into No. 4 trestle until approximately centered. Trestle should hold on two ties. No. 4

should just touch the mounting surface and may be adjusted by sliding along track after layout is completed. Insert track into No. 5 trestle so that it holds on last two ties of track before bridge.

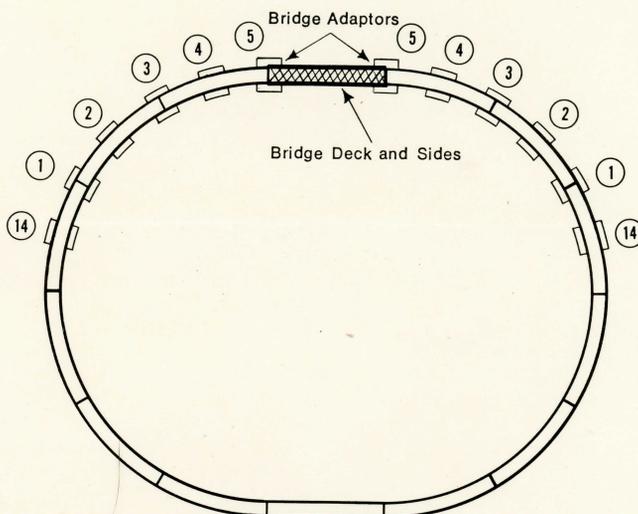

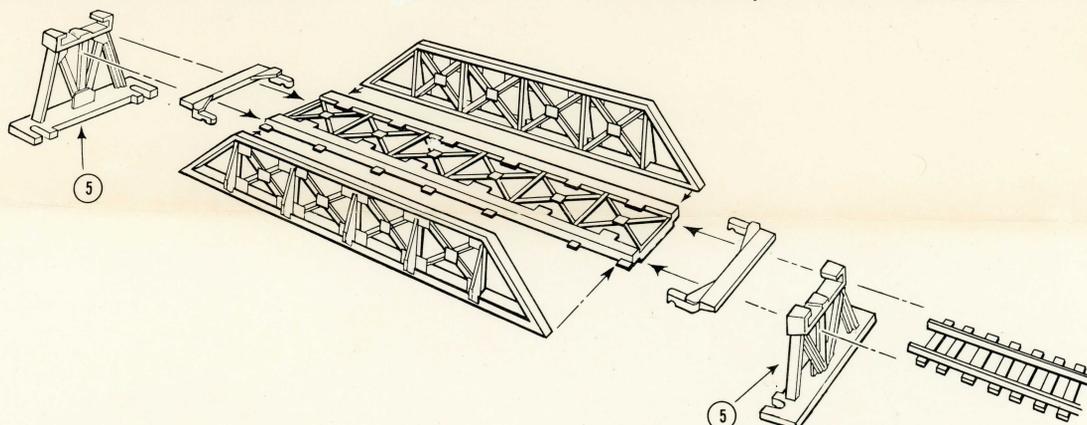

6. Follow a similar procedure for trestles 1 and 2, see track plan for position of trestles.

7. The two No. 14 ramps are assembled to the track by positioning the two round lugs between two track ties so that the track is supported evenly down to grade level.

8. Join the remaining track sections to complete the track plan. When assembly is complete, slight adjustments may be made to the trestles to be sure that all the bases rest on the mounting surface.

9. For permanent assembly, nail or screw the trestles to the mounting surface.

The grade can be changed by the spacing of the trestles, but for best support there should be at least a trestle at the center and at the joint of each track section.
